

## Cycle Accounting

### T/S-ZX Financial Report Generator™

In addition to its regular features, T/S and ZX-Calc can be bought as an accounting-model program. This means that the program can be purchased with built-in templates that will allow a relatively small business (i.e., a sole proprietorship that rents rather than owns land/premises/offices, etc.), to prepare the ten most fundamental financial reports needed to analyze/plan a financial picture of a company from the vantage point of cash-flow, income, a balance statement, ratio-analysis and working capital. You can use the program to do the necessary calculations and enter the right amounts in the cells provided to the right of the listed labels. There are basically 10 categories. Each category includes their respective individual sub-categories that define any numerical value within each category. For those owners of T/S or ZX-Calc who have the program but not the accounting package and now wish to do so, a printout version is for sale. You will then have to manually enter the templates and afterwards be sure to save this template version on cassette tape for later use.

## Appointment Scheduler

### T/S-CALENDAR 2000™ ZX-CALENDAR™

Time management is an important aspect of any serious business and personal agenda. Planning how to spend our time leaves us better prepared before and while we are spending it and we remain better organized after we finish spending it. T/S and ZX-Calendar operate in 16-64K RAM affording 25 appointments in 16K, 100 in 32K, or 180 in 48K and 64K. T/S-Calendar affords only 50 appointments in 28K. Each appointment record holds a maximum of 220 characters. The main menu includes enter, search/check/sort, change, save, clear and print any and all appointments made on a specific date or with any party. Output to either the ZX/TS printer is permissible. This program will permit you to remember to do something or to be somewhere important by cataloging your answers to six questions that you must account for in order not to waste time when it is scarce: when, with whom, at what time, for how long, where and what are you going to discuss and conclude when you get together with someone else? The program lets you permanently originate, record, classify, search, sort, calculate, modify, summarize, obtain a written report and store your answers to the preceding questions so that you will not forget what you decide to do with your time. This program identifies your time according to when you are going to spend it and with whom you are going to share it. Through these forms of labeling appointments you are able to verify or modify how your time is budgeted without wasting ink, paper or more time trying to remember what you said to yourself or what someone else said to you or where you placed certain written messages that you now can't find. With this program you will know where you can find exactly what you need to know about where you want to and have to be, or where you have been, before you get and after you got there. Thus, T/S and ZX-Calendar will let you plan your time so that you will never have to worry about what is ahead or what came before, for you will always know, by using it, to never be caught astray by any time-frame.

Dear User:

I have spent a great deal of time in researching, developing, testing and enhancing what can be referred to as high quality business software.

A few minutes of your time spent in reading the text of each subsequent product will demonstrate to you the unique features that each of my programs contains.

When you finish reading you will realize that for their price my programs are a real bargain and a basic investment for your computing needs.

If you belong to a User Group be sure to show my flyer to other members so that they may take advantage of this special offer.

Orders will be shipped the same day that they are received at my office and payment should only be by check or money order in my name or my company's name.

## Word Processing

T/S-TEXT 2000™  
ZX-TEXT™

A word processor is to a computer user what a typewriter is to a typist, except that the former has more advantages than the latter. ZX-TEXT operates in 16-64K RAM providing 1300 to 6500 words per file. T/S-TEXT 2000 operates in 48K RAM and provides a maximum of 3900 words per file. They both feature 6 different menu options and 10 different edit commands. Text is written on a per-line basis with quick speed and with horizontal back-space and delete capabilities. You can access the editor directly from write mode and vice versa. Text can be proofread on a per-line basis allowing for enough time to determine if any editing is needed. The text editor allows a line of text to be deleted, inserted, replaced and listed for editing. You may also change a word or expression within a line, stop or start text while it is scrolling up the screen, begin reading text from the first line of the file, reenter write mode from the editor, return to the main menu or create a window so that you can read-edit two files simultaneously. The print function takes text displayed on the screen and outputs to the T/S printer. Files may be saved on tape cassette with the use of a single command or by the same token they can be erased from storage or RAM so that the full capacity of the program can be used for other purposes such as composing letters, reports, articles, memos, standard forms, instructions, ads, graphs, telephone directory, lists of customers, members and friends. Also copies of files are always less expensive and easier to run than using a photocopier. Other advantages are savings in time, paper, ink, correcting mistakes and adding afterthoughts more efficiently than doing them by either handwriting or using a typewriter.

## Spreadsheet Calculator

T/S-CALC 2000™  
ZX-CALC™

An electronic spreadsheet calculator is the fundamental basic tool for summarizing, reporting and analyzing in matrix form any accounting, mathematical or scientific manipulation of numbers. T/S and ZX-Calc operate in 32-64K RAM and afford a maximum of 3360 characters/spreadsheet. The entire matrix consists of 15 columns (letters A-O) and 30 rows (numbers 1-30) with 8 characters/cell. Unlike other popular ESCs, T/S and ZX-Calc use in calculations and within cells all 14 math functions on the ZX-81/TS2068. It offers a unique \*SUM function that totals one or more rows/columns simultaneously. Parenthesis can be used within equations. There is no fixed limit on how many equations may be entered. Formulas may be stored in all 420 cells of the spreadsheet. The display affords 15 rows/columns. Loading of data into more than one cell can occur across/down one or more row/column simultaneously. With vertical windowing you can arrange a set of columns in any order, or practice using fixed-variable-alignment display formats. The menu offers 6 options: enter/erase, move, calculate, print, save and clear the spreadsheet. Enter/erase allows the entering, deletion or data alignment within a cell through the use of a mobile cursor. With the move option you may move around the entire spreadsheet to access any row, column or cell. The calculate option allows you to enter labels, values or formulas into a cell or write and enter equations that will act upon the data already within the spreadsheet. You can also enter bar graphs into a cell in this option. Absolute/relative replication, down/across a column/row, is also allowed by this option. Also this option allows the automatic calculation of the entire spreadsheet with one single command. Print allows you to output to either the ZX/TS printer the entire spreadsheet by column-sets and row-pages through use of the COPY command. The entire spreadsheet may be saved on cassette tape or you may clear all data from it or erase the program from RAM entirely. The most salient advantage provided by an ESC over specifically vertical applications software is that an ESC provides a reusable framework with which you can compose any specific financial model rather than just be limited to only one statically fixed format for storing, displaying and manipulating numerical data.
